Summary

Software Engineer with 4+ years of experience in Java backend development and enterprise application support. Skilled in developing Spring Boot applications, REST APIs, batch processing solutions, and backend integrations using Java, JPA/Hibernate, PostgreSQL, and Spring Security. Experienced in production support, Linux environments, infrastructure upgrade coordination, and enterprise database migration support activities across Oracle and SQL Server platforms.

Technical Skills

Programming Languages: Java, SQL

Backend & Frameworks: Spring Boot, Spring Batch, Spring Security, RESTful APIs, JPA/Hibernate

Databases: MySQL, PostgreSQL

Architecture & Concepts: Clean Architecture, Batch Processing, File Processing, API Integration, Exception Handling

Tools & Platforms: Maven, Git, GitHub, Postman, Swagger/OpenAPI, IntelliJ IDEA

Operating Systems: Windows, Linux (RHEL)

Work Experience

Infosys, Systems Engineer

Nov 2021 - Present

Transformer Asset Management System

Technologies: Java, Spring Boot, Spring Security, JPA/Hibernate, PostgreSQL, JWT, Swagger/OpenAPI, Maven, Git

- Designed and developed RESTful backend APIs for transformer asset registration, maintenance, and lifecycle management.
- Implemented Clean Architecture–inspired layered design with Domain, Application, Infrastructure, and Presentation layers.
- Developed secure authentication and authorization using JWT Bearer tokens and role-based access control.
- Built PostgreSQL persistence layer using Spring Data JPA and Hibernate entity relationships.
- Implemented centralized exception handling using @ControllerAdvice, request validation using Jakarta Validation annotations, logging, and standardized API response structures.
- Documented APIs using Swagger/OpenAPI for frontend and testing integration.

Utility Document Processing & Change Detection System

Technologies: Java, Spring Boot, Spring Batch, Maven, Microsoft Graph API, Git

- Designed and developed Spring Boot batch jobs to automate daily processing of XML files and document metadata.
- Implemented hash-based change detection to skip unchanged files, reducing unnecessary processing and improving batch efficiency.
- Developed validation logic to ensure data accuracy and compliance with business rules.
- Integrated Microsoft Graph API for secure document upload, retrieval, and metadata handling.
- Implemented logging, exception handling, and retry mechanisms to ensure reliable batch execution.
- Designed file-based and API-driven batch processing workflows without database persistence.
- Supported Linux-based deployment activities and production batch execution workflows.

Enterprise Application & Infrastructure Upgrade Project

- Coordinated and supported enterprise application upgrades across Windows Server and Linux (RHEL) environments.
- Supported Oracle Database, LDAP upgrade and Exadata migration coordination activities.
- Performed pre- and post-upgrade validation, DB configuration checks, and production support activities.
- Collaborated with database, middleware, and infrastructure teams to ensure successful production go-lives.

Projects

Job Execution Tracking System (Spring Boot)

Technologies: Java, Spring Boot, REST APIs, JPA/Hibernate, MySQL

- Developed a backend application to track scheduled and manual job executions with real-time status monitoring.
- Designed RESTful APIs to trigger jobs, retrieve execution history, and fetch execution logs.
- Implemented layered backend architecture using Controller, Service, Repository, and DTO layers.
- Used JPA/Hibernate with MySQL for entity persistence and relational data handling.
- Added validation, logging, and exception handling for reliable job execution tracking.
- Implemented pagination support for execution history APIs using Spring Data JPA Pageable and Page interfaces.
- Tested APIs using Postman, Swagger/OpenAPI and managed source control using Git/GitHub

Education

Master of Computer Applications
Jain University

July 2022 - July 2024
CGPA: 9.1/10
